

Multiband PowerTapper 150-2700 MHz

DESCRIPTION

- 500 W power taper with 4.8 to 30 dB coupling covering the 150 - 2700 MHz.
- Taps off a portion of the signal from the main line.
- Amphenol Procom tappers are symmetrical around the main line. Meaning that you will have the same good SWR from both sides of the main line.
- Excellent high-power performance.
- Very low insertion loss over the entire frequency range.
- Power tappers are frequently used in distributed antenna systems in buildings or tunnels. Tappers operate similarly to directional couplers, but without the directivity (no isolation between output port and coupled port) and have relatively broad bandwidths.
